

IGNITION LIGHTSPEED

Take flight on a jet-black night in a rocket to the stars
Get ready to zoom straight past the moon and take a left turn after Mars
As the engines burn and the planets turn and the light years slip away
We'll be heading out to a purple cloud at the heart of the Milky Way!

CHORUS: (Ten) Prepare to fly my friend
(Nine) Way on through space and time
(Eight) Time to accelerate, across the heavens, there goes seven
Wave goodbye to six and five, let's hope we make it back alive
Four, three, two, one, World here we come
Ignition, what's your mission?
Ignition, what's your mission? (repeat x 3)

Who knows what you will find, what wonders you may see?
When you take a trip, on a big spaceship to the edge of the galaxy
It's a mystery zone, but it could be home to another form of life
And when the ship descends we could be making friends or fighting to survive

CHORUS
Lightspeed, that's the only right speed (repeat x 3)
